

Roll-out Facility

Continual ability to invest in
IT and Telecom projects

Benefits for you

Roll-out Facility is a lease solution that 'grows' along with the investments you make in IT and Telecom projects. It is the ideal solution for a flexible investment program, where the purchase and implementation dates do not systematically coincide.

Tailored to suit you

- Econocom arranges a credit facility during a previously-specified roll-out period. The lease starts after the investment period. You decide for yourself the timing of the lease payments and the duration of the contract.
- All investments in IT and Telecom hardware, software and services can be included in the lease agreement.
- You have complete freedom to decide what, when and where you buy. IT Financial Services operates independently of manufacturers, suppliers and banks.

Ease and simplicity

- Econocom confirms and pays your suppliers' invoices. This relieves you of administrative tasks of limited added value.
- We make an estimate of your planned investments together with you. For this, Econocom creates maximum financing capability without the obligation to buy. Are there unexpected investments? No problem. Econocom guarantees flexibility and adjusts the level of the credit as things progress.

Optimum management

- Investments made in IT and Telecom are totalled up each month and translated into monthly payments to be paid by you in accordance with the lease factor agreed to beforehand.
- By leasing, you transfer the risk of obsolescence to Econocom. With operational leasing, you free up your cash resources for investments in projects that add value.
- At the end of the lifecycle of your IT and Telecom equipment, Econocom organizes the logistics services for the removal of the equipment and can guarantee data cleaning upon your request.
- Econocom's Master IT Web Reports provide you with online access to a detailed and up-to-date overview of all the leased hardware and the IT and Telecom budgets relating to it. This saves you money and time, and pro-active management of your IT and Telecom infrastructure is within your reach.

Flexible financing
in line with your
investment planning

Control over the progress
of the budgets for your
IT and Telecom projects

Link-up to your actual
investment program

Reduction of your
administrative burden
